

FILM FACED PLYWOOD

Film faced plywood is a black marine plywood panel developed and engineered from graded poplar or eucalyptus veneers to the Chinese Formwork plywood standard GB/T 17656-2018. Glued with melamine or phenol fortified urea-formaldehyde resin and overlaid with a hard durable waterproof resin impregnated kraft to give concrete a smooth finish.

The glue is weather and boiling proof aka WBP. Film faced plywood can withstand the rigours of construction and moisture and still provide a significant number of re-uses. Our formply is manufactured and structurally characterised specifically for use in formwork to the requirements of GB/T 17656-2018.

Core Veneer	Poplar, Eucalyptus
Surface	Black Film, Brown Film, Wire Mesh, Hexa Grip
Adhesive	WBP
Length	2440mm
Width	1220mm
Thickness	12mm, 15mm, 18mm
